**CARES Surgicenter Automates Patient Preop Process with
SourcePlus Passport**

Perioperative Workflow Solution Serves as Key Competitive Differentiator in Busy ASC Market; Enables Facility to Provide More Convenient and Efficient Patient Services

Scituate, MA – June 3, 2009 – Medical Web Technologies (MWT), in partnership with SourceMedical, today announced CARES Surgicenter, LLC has selected its perioperative workflow solution, [One Medical Passport](#), to ease the preop process for patients. In addition to improving patient service, the solution reduces operating costs while better utilizing nursing staff, thus making CARES Surgicenter more competitive.

CARES Surgicenter (www.caressurgicenter.com) is a multi-specialty ambulatory surgery center providing outpatient surgical service for Cosmetic Surgery, ENT, General Surgery, Gynecology, Orthopedics, Ophthalmology, Podiatry, Urology and GI. The facility's 150 doctors treat more than 10,000 patients a year with an average case load of 50 surgeries a day. CARES Surgicenter is a Joint Venture with Saint Peter's University Hospital, a member of Saint Peter's Healthcare System in New Brunswick NJ.

Previously, CARES Surgicenter relied on the antiquated yet common practice of phoning patients in advance of their surgical procedure. In addition to being inconvenient for patients and labor intensive for staff, the preop process was costly and time consuming.

"To separate our center from the competition, we needed a more efficient, patient-friendly preop process," said Marjorie Romano, administrator of CARES Surgicenter. "After our initial review of One Medical Passport we recognized it offered the competitive edge we needed. Not only are we able to better serve our patients, our nursing staff can focus more on patient care and less on administrative processes. "

Using One Medical Passport, sold by [SourceMedical](#) as SourcePlus Passport, patients complete their own preoperative medical history online from the privacy and comfort of their own homes - needing only a computer with Internet access. Because it takes the complex task of providing a complete health history and breaks it down into a series of small steps, the process is easy enough for the average patient (even those with limited computer experience) to complete in less than 30 minutes.

"One of the biggest benefits when implementing One Medical Passport is the ability to deliver higher quality patient care," said Stephen Punzak, MD, CEO of MWT. "Enabling patients to securely create and submit their own medical histories via the Internet addresses many of the roadblocks and unnecessary labor costs that normally occur in the preop process. Plus, patients get the benefit of a more efficient preop process and

continued access to an online personal health record which they can easily update whenever needed.”

About SourceMedical

SourceMedical provides outpatient information solutions and services for ambulatory surgery centers, specialty hospitals and rehabilitation clinics nationwide. With a 30-year track record and more than 4,100 satisfied customers, SourceMedical is the trusted source for innovative applications, in-depth industry expertise and unsurpassed customer service. The company’s unique, end-to-end systems improve operational efficiency and cash flow while enabling healthcare facilities to capture, analyze and exchange data to deliver a higher standard of patient care. www.sourcemed.net

About Medical Web Technologies

Medical Web Technologies, www.mwtcorp.com, provides innovative, web-based medical information solutions that allow patients and healthcare providers to easily create, store and distribute a patient’s complete medical information. MWT’s solutions, One Medical Passport and SourcePlus Passport, are used nationwide in a variety of settings that span from fast-paced ASCs to major medical centers to solo practitioner physician offices. With both One Medical Passport and SourcePlus Passport, medical facilities, physicians, nurses and administrative staff have the ability to access accurate, uniform, legible and comprehensive patient medical information 24 hours a day, 365 days a year, thus significantly improving efficiency and lowering costs by reducing the time and effort required to obtain a patient’s medical information.
