iMDsoft and Medical Web Technologies partner for integrated pre-op solution

MWT's online pre-op workflow solution integrated with the MetaVision AIMS provides significant cost and time savings

Needham, MA – **September 20, 2010** - iMDsoft®, a global leader in hospital-wide clinical information systems, and Medical Web Technologies, a leading provider of web-based medical information solutions today announced a partnership to jointly offer their technologies. iMDsoft will now offer MWT's One Medical Passport online pre-op workflow solution as part of its fully integrated end-to-end solution for the perioperative environment.

The MetaVision Anesthesia Information Management System (AIMS) builds on a decade of experience worldwide to support the entire perioperative workflow, from pre-op, through intra-op and recovery. It generates a complete, accurate, billable anesthesia record and features powerful decision support and analysis tools that promote patient safety, enhance quality initiatives, and facilitate cost containment, revenue capture, research, and compliance.

One Medical Passport complements iMDsoft's pre-op solution by offering an online option that allows patients to quickly and easily complete their own medical history securely via the internet. The information is immediately available to nurses, anesthesiologists and registration staff, as well as the patient's surgeon. Integration with MetaVision AIMS reduces the time clinicians spend manually keying information as well as the associated errors.

"We are pleased to offer the One Medical Passport technology as a part of the complete iMDsoft solution covering the entire perioperative workflow", said Phyllis Gotlib CEO of iMDsoft. "Both healthcare professionals and patients will benefit from the gains in efficiency and the convenience of a web based patient admission tool which interfaces with the MetaVision Anesthesia Information Management System. One Medical Passport will further increase the return on investment MetaVision customers already enjoy. "

"Enabling patients to create their own medical record online is a value added service that translates to significant cost and time savings. Freeing nurses from routine data entry enables them to spend more time on patient care and less on administrative tasks," said Dr. Stephen Punzak, president and CEO of Medical Web Technologies. "Offering One Medical Passport to iMDsoft customers allows them to experience the many benefits associated with bringing the pre-op process online."

About iMDsoft

iMDsoft is a leading provider of Clinical Information Systems (CIS) for preoperative, critical and

general care. The company's flagship family of solutions, the MetaVision Suite, was first implemented in 1999. It has since become a market leader, with implementations in a wide range of ICUs, ORs, and, recently, general wards. Major medical centers across the US, Europe, and Asia, including 4 of the top 10 hospitals in the US and 13 of the top 50 hospitals in Europe, use iMDsoft's.

About Medical Web Technologies

Medical Web Technologies, www.mwtcorp.com, provides innovative, web-based medical information solutions that allow patients and healthcare providers to easily create, store and distribute a patient's complete medical information. In addition to a more efficient preop process, patients benefit from continued access to an online personal health record which they can easily update whenever needed within One Medical Passport. MWT's solutions, One Medical Passport and SourcePlus Passport, are used nationwide in a variety of settings that span from fast-paced ASCs and major medical centers to solo practitioner physician offices.
